BARK & BRANCH LANDSCAPE · TREE PLANTING

Specimen Tree Planting

Set, fed and treated at planting, and cleaned up when we leave.

(657) 525-9737 · CA Lic. #1119893 · Licensed & Insured

What every planting includes

1. Dig the planting pit to box depth
2. Set the tree with the root flare at finish grade
3. Remove the box
4. Backfill with site soil
5. Feed with Agriform tablets and Gro-Power Plus
6. Treat with Moon Juice for transplant shock
7. Water in thoroughly
8. Haul off the box lumber and clean up

Excess soil from the pit is spread around the planters or left on site unless soil export is selected.

From nursery to garden

Delivered. The box is checked curbside before it moves.

Lifted. Crane set, so nothing is dragged across your hardscape.

Set. Placed and faced to its best side, location confirmed with you.

Fed and treated at planting

Agriform planting tablets

Slow-release feed placed at the root ball, where new roots grow first.

Gro-Power Plus

Conditions the soil around the root ball and adds nutrients.

Moon Juice

Helps the tree through transplant shock in the weeks after the move.

A typical install drops in a basic 6-24-24 starter and walks away.

Watered in and cleaned up

Watered in

A deep first soak settles the soil around the root ball.

Box lumber hauled off

The box comes apart and leaves with us.

Excess soil handled

Spread around your planters or left on site, unless you choose soil export.

Good to know before planting day

Watering

Sprinklers need to be working the week before planting. If not, the tree needs hand watering bi-weekly until it is established.

Location

We confirm the exact spot with you on site before we dig.

Hard digging

Rock or very hard soil is billed at $87.36 per hour per person. We tell you before we proceed.

Crane timing

If the tree delivery is late, crane standby is billed at the crane company's hourly rate.

Not included

Excess soil export, tree inspection drains, staking or anchoring, irrigation to the tree, crane permits, no-parking and traffic control.

Client-supplied trees

Quarterly inspections are available to keep an eye on your tree through its first year.

Extras available on request

Not needed for the planting, but worth a look if you want the tree to thrive long term.

Extra	Price
Tree inspection drain	$390 per tree
Soil export (varies with soil type and container size)	$265 per yard
Nutrient-rich soil backfill (soil export required)	$380 per yard
Arborist inspection at 90 days	$450
Yearly tree oversight, quarterly inspections	$1,500 per year

Next steps

1. Approve the quote with a deposit of 10% or $1,000, whichever is less. That reserves the crane date.

2. We confirm the exact location with you on site before we dig.

3. Balance is due on completion, within five days.
